Meet the most advanced labor & delivery simulation solution in the world. From early pregnancy complications, high-risk deliveries, and postpartum emergencies to non-gravid scenarios for general nursing care, VICTORIA provides healthcare students and professionals with true-to-life clinical experiences to facilitate learning and development.
VICTORIA® S2200 | Labor and Delivery Patient Simulator

VICTORIA delivers exceptional training through a truly immersive experience.

From early pregnancy complications, high-risk deliveries, and postpartum emergencies to non-gravid scenarios, VICTORIA simulates a full range of obstetrical events to facilitate teamwork and deepen critical thinking skills in learners of all levels. More than a childbirth simulator, VICTORIA is a complete simulation solution developed from decades of obstetrical experience. It is a comprehensive package of tools and support designed to help improve patient safety in women’s health through education and training.

More than just realistic, VICTORIA is remarkably lifelike and anatomically accurate.

VICTORIA redefines physical fidelity with accurate anatomical proportions that facilitate learning without compromising clinical technique. The smooth, full-body skin provides a look and feel designed to immerse learners in the simulation.

- Wireless and tetherless; up to 10hrs. of battery life²
- New interactive eyes: automatic visual object tracking and lifelike eye movements
- Fully programmable airway, breathing, and physiological circulation parameters
- True-to-life shoulder dystocia, breech, and C-section deliveries
- Births lifelike, full-term baby featuring programmable vitals for APGAR scoring
- Integrated array of sensors track the participants’ performance in real-time
- Automatic recognition of 50+ virtual medications
- Supports real monitoring equipment: EKG, capnography, defib., NIBP, TOCO, and pulse oximeters
- Includes Microsoft Surface Pro tablet PC and Virtual Patient/CTG Monitor
- Includes new VICTORIA Labor & Delivery Simulation Learning Experiences scenario package
- Video training library covering setup and operation
- Converts into a non-pregnant patient for general nursing and gynecology training

VICTORIA® S2200 | Labor and Delivery Patient Simulator

A breakthrough in patient-provider simulation training.

VICTORIA’s new interactive eyes are more than unique. They are game-changing. VICTORIA can track objects visually and present signs of stress, stroke, head trauma, drug use, and many other diseases and conditions.

Streaming audio lets you act as the voice of the patient and engage participants in realistic dialogue to rehearse patient-provider interactions much more effectively.

- Accommodation test: automatic horizontal tracking and manual vertical tracking
- Strabismus: exotropia and esotropia
- Nystagmus: eyeball twitching
- Blepharospasm: eyelid twitching
- Ptosis: eyelid droop
- Realistic idle eye movement
- Independent pupillary light reflex
- Mydriasis: blown pupil
- Anisocoria: unequal pupil sizes
- Consensual pupillary light reflex

Includes New Labor & Delivery Simulation Learning Experiences Courseware.

The new VICTORIA Labor & Delivery Simulation Learning Experiences (SLEs) provide you with a library of ready-to-use, evidence-based scenarios designed to help you maximize participant’s learning through outcome-focused simulated clinical patient encounters.

The package includes nine SLEs complete with a facilitator’s guidebook for planning, setting up, and facilitating each learning experience.

- Amniotic Fluid Embolism
- Breech Vaginal Delivery
- Magnesium Toxicity
- Normal Vaginal Delivery
- Placental Abruption
- Postpartum Hemorrhage
- Preeclampsia
- Prolapsed Cord
- Shoulder Dystocia

Transition into the real world using real tools and monitoring devices.

VICTORIA supports the widest range of real patient monitoring equipment of any childbirth simulator, allowing participants to train using the tools they will use in real situations.

- Fetal Monitor
- ECG Monitor
- Defibrillator
- Pulse Oximeter
- Capnograph
- NIBP Monitor

Visit us online gaumard.com
The gold standard in OB emergency management and care education.

VICTORIA® simulates shoulder dystocia, breech, and C-section deliveries with a level of fidelity that truly suspends disbelief. Participants can immerse themselves deeper and faster as they engage in problem-solving and collaborative teamwork. What’s more, VICTORIA captures participants’ performance through an array of hidden sensors to ensure no learning opportunities are missed during debriefing.

Shoulder Dystocia

VICTORIA can present tell-tale signs of a shoulder dystocia complication, including the fetal head emerging and retracting (turtle sign), decrease in the fetal heart rate as seen on the fetal monitor, and delayed external rotation.

- Realistic retraction of the fetal head against the perineum
- Turtle signs synchronize with contractions and the fetal heart rate shown on the fetal monitor
- Suprapubic pressure detection and logging

Breech Deliveries

Simulate a realistic breech birth to prepare care providers for low-frequency, high-risk vaginal deliveries. The neonate’s smooth skin and articulated limbs support the use of real instruments and advanced maneuvers.

- Simulate an obstruction at any point during labor with precise repeatability
- Practice obstetrical maneuvers including Rubin, Woods’ Screw, arm sweeps, Love’s, or Zavanelli
- Hip joint sensors detect and log leg angles

C-section deliveries

Use real surgical instruments for cutting and suturing the abdominal and uterine walls. The replaceable abdominal insert is multi-layered to simulate real skin and bleeds when cut.

- Forceps indication, application, and traction
- Vacuum cup application, suctioning, and traction
- Advanced delivery management techniques: Pinard’s, Muscut, Ritgen’s, Lovset

Newborn assessment and transitional care.

VICTORIA births a full-term baby of realistic size and weight designed to provide participants with the most realistic visual and tactile experience possible. What’s more, VICTORIA’s newborn has measurable vitals, which allow participants to perform a health assessment and determine if additional care is needed.

- Lifelike full-term baby of realistic size and weight
- Smooth full-body skin with seamless joints
- Internal sensors record rotation of the fetal head and pull force in real-time
- Anatomical landmarks include palpable fontanelles and sutures

Hands-on postpartum hemorrhage management.

VICTORIA features programmable bleeding. Her vital signs deteriorate over time in response to the selected blood loss, leading to the onset of shock. Such bleeding may be reduced through fundal massage, medication, or even the insertion and inflation of a balloon tamponade device.

- Postpartum abdomen with hemorrhaging uterus and 1-liter reservoir facilitate the transition between delivery and postpartum simulations
- Vital signs automatically deteriorate in response to postpartum blood loss
- Tactile realism during fundal massage

Episiotomy Repair

VICTORIA includes three replaceable episiotomy modules which allow for multiple surgical repairs using real surgical instruments.

- Midline episiotomy with periurethral tears
- Mediolateral episiotomy with tears to the labia minora
- Multi-layer fourth-degree episiotomy with hemorrhaging vaginal sidewall tears and cervical lacerations
Manage the full simulation experience from one intuitive interface.

The UNI® simulator control software puts all the best simulation tools at your fingertips. UNI helps you run realistic scenarios with less effort, automate tasks to make operation easier, and captures more useful participant data for richer debriefing. Best of all, UNI comes preinstalled in the powerful and lightweight Microsoft Surface Pro tablet PC, allowing you to work conveniently anywhere training takes place.

**General**
- Tetherless and wireless; fully responsive during transport
- Internal rechargeable battery provides up to 10 hrs. of tetherless operation
- Smooth and supple full-body skin with seamless articulating joints
- Lifelike joint animation: neck, shoulder, elbow, wrist, hip, knees, and ankle
- Internal high-capacity fluid reservoirs
- (09) Labor & Delivery Simulation Learning Experiences
- NODEL® Fetus-Newborn wireless link capability
- Includes touchscreen virtual patient monitor and CTG

**Neurological**
- Programmable blinking rate, pupil response, and unilateral eye movement
- Interactive eyes can follow a moving object
- Seizures with selectable intensity levels
- Wireless streaming voice: be the voice of VICTORIA and listen to participants’ responses via a wireless headset
- Record and playback vocal responses in any language

**Airway**
- Haad tilt/chin liftjaw thrust
- Oral or nasal intubation
- Difficult airway: laryngospasm, tongue base, oropharyngeal edema, and pharyngeal swelling
- Airway intubation depth detection, logging, and reporting
- Esophageal intubation
- Selectable upper airway sounds are synchronized with breathing patterns
- Supports BVH and mechanical ventilation

**Breathing**
- Spontaneous breathing; selectable respiratory patterns and lung sounds
- Programmable respiratory rates and inspiratory/expiratory ratios
- Realistic chest rise during assisted ventilation
- Ventilation performance, real-time monitoring, reporting, and logging
- Right mainstem intubation detection with automatic unilateral chest rise
- Real CO2 exhalation capable

**Cardiac**
- eCPR® Real-time compression and ventilation performance
- Effective compressions generate palpable pulses and ECG artifacts
- Select from an extensive library of preprogrammed heart rhythms with dysrhythmia options
- Real-time 4-lead electrocardiogram monitoring using real ECG devices
- Defibrillation, cardioversion, and pacing using real energy
- Realistic heart sounds
- Programmable heart rate synchronized with ECG and pulse
- Virtual 12-lead dynamic ECG rhythms

**Circulation**
- Bilateral palmar carotid, radial, and brachial pulses are synchronized with heart rate and blood pressure
- Monitor oxygen saturation using real oximeters
- Measure blood pressure using a real manual or automatic blood pressure cuff
- Bilateral venous access
- Automatic drug recognition detects medication type, dose, and rate injected into the lower right arm
- Subclavicular and intramuscular injection sites for placement exercises

**Gastrointestinal**
- Selectable bowel sounds
- Internal fluid bladder with urethra
- Selectable upper abdominal sounds
- Multi-layer fourth-degree episiotomy
- Replaceable episiotomy inserts support suturing
- Force sensor reports traction and torsion applied to the fetus in real-time
- Robotic maneuvers, suprapubic pressure, Zavanelli, Woods’ Screw, and “hands and knees” position detection
- Births full-term neonate of realistic size and weight
- Active neonate: programmable heart and respiratory sounds, crying, cyanosis, and movement
- Replaceable episiotomy flow control
- 3 battery-powered HD cameras
- One-Year Limited Warranty
- Support compression stocking
- Includes a preprogrammed drug library of anticoagulation regimens
- Spontaneous breathing; selectable respiratory patterns and lung sounds
- Programmable respiratory rates and inspiratory/expiratory ratios
- Realistic chest rise during assisted ventilation
- Precision Delivery System: computer-controlled fetal descent and cardinal movements
- Programmable normal, breech, shoulder dystocia, instrument-assisted, and C-section deliveries
- Software-activated self-lubricating birth canal
- Realistic placenta with detachable fragments and umbilical cord
- Epidural placement and needle detection; palpable anatomical landmarks and skin layers
- Intrapartum bleeding
- Force sensor reports traction and torsion applied to the fetus in real-time
- Robot maneuvers, suprapubic pressure, Zavanelli, Woods’ Screw, and “hands and knees” position detection
- Births full-term neonate of realistic size and weight
- Active neonate: programmable heart and respiratory sounds, crying, cyanosis, and movement
- Replaceable episiotomy inserts support suturing
- Multi-layer fourth-degree episiotomy with hemorrhaging vaginal sidewall tears and cervical lacerations
- Programmable uterine firmness and hemorrhaging supports sutures and balloon tamponade
- Programmable hemmorhage flow control
- Selectable IUD placement
- Antepartum hemorrhage
- Anteverted uterus
- Postpartum hemorrhage
- Mediolateral episiotomy suture trainer
- Uterine manipulation
- Suppository placement
- Use of BVM
- Uterine manipulation
- Revisable hysterectomy
- Internal high-capacity fluid reservoirs
- Lifelike joint articulation: neck, shoulder, elbow, wrist, hip, knees, and ankle
- Internal high-capacity fluid reservoirs
- Lifelike joint articulation: neck, shoulder, elbow, wrist, hip, knees, and ankle
- Internal high-capacity fluid reservoirs
